

HAMMOND AUTOTRANSFORMERS FOR USE WITH AE 3TL INVERTERS

Advanced Energy® has partnered with Hammond Power Solutions to provide a set of eight autotransformers specifically selected for optimized performance in a solar installation with AE 3TL inverters in AC blocks from 20 kW to 500 kW.

Benefits

- Engineered solution guarantees technical compatibility and reduces effort for system designers.
- Single-source solution simplifies procurement and service processes.
- Bundled solution enables lower installed cost than most native 208 V and 600 V string inverters.
- High-efficiency autotransformer and inverter maximize energy harvest.

Features

- Standard 10-year warranty backed by two strong partners; Extended warranties available up to 20 years.
- Wall-mountable through 75 kVA

AE's 480 VAC native PV inverters with autotransformers save money and increase energy production versus native 208 VAC PV inverter solutions and can be used in either step-down (208 VAC, 240 VAC, 400 VAC) or step-up (600 VAC) applications.

Typical Installation

Contact AE for detailed application and installation instructions.
