

Dear Customer,

Advanced Energy is pleased to introduce our various options for maintenance programs for the European market.

To support the smooth and reliable action of your central inverter any longer, Advanced Energy developed a preventative maintenance program.

This maintenance program includes different choices for the accomplishment of the maintenance as well as the change of wear parts like filter and coolers in given intervals. The coolers on the central inverter are playing a big role for the ordinary cooling and guarantee a long durability of your central inverter.

Please consult our specialists and send an email to:

→ inverter-maintenance@aei.com

We are happy to contact you and send you an individual offer for your inverters.

We look forward to working with you.

Best Regards

AEI Power GmbH
